Title: The Gaia-ESO Survey

Abstract: The Gaia-ESO Survey is a 500N ESO-VLT-FLAMES Public Spectroscopic Survey.

The Survey involves a consortium of some 400 people across some 100 institutes, and is in many ways a prototype of ways to involve a wide community in information-rich but volume limited scientific data.

I will provide an updated overview of the Gaia-ESO Survey, its science outcomes, and implications for the E-ELT era. This will include both scientific and community sociological implications.
