## Script for ESOcast Light 260: A new view of M87's supermassive black hole

ESOcast Light 260	
[Visual starts]	
New ESOcast intro	New ESOcast introduction
Title: First image of a black hole expelling a powerful jet	
1. With the help of <b>ALMA</b> ,	
astronomers have obtained a new image	
of the <b>supermassive black hole</b> at the centre of the M87 galaxy.	
2. The new image shows both <b>the shadow of the black hole</b>	
and its <b>powerful jet</b> .	
3. The image was obtained with <b>several telescopes worldwide</b>	
working together as a virtual Earth-sized telescope.	
4. The <b>shadow</b> is created as the black hole bends	
and captures some of the light emitted by the matter swirling around it.	

4. The <b>jet</b> consists of matter <b>shooting away</b> from the black hole.	
5. Thanks to this image, astronomers can better understand how black holes launch such powerful jets.	
[Outro]	Produced by ESO, the European Southern Observatory. Reaching new heights in Astronomy.
