Script for ECL 264: Balsalobre-Ruza ALMA tentative co-orbital

ESOcast Light 264	
[Visual starts]	
New ESOcast intro	New ESOcast introduction
Title:	
Does this planet have a "sibling" sharing the same orbit?	
1. Using ALMA ,	
astronomers have found a possible "sibling " to a planet	
orbiting the distant star PDS 70 .	
2. The team detected a cloud of debris	
in one of the regions of the planet's orbit	
where a "sibling" planet would be expected to exist	
trapped by the gravity of the star and the planet.	
3. The debris could be the building blocks of a new planet ,	
or the remnants of a planet already formed .	

4.	
If confirmed this would be the strongest observational evidence yet	
that two planets can share the same orbit .	
[Outro]	Produced by ESO, the European Southern Observatory. Reaching new heights in Astronomy.
